Important information

	<p>Before using this camera, please carefully read User's Manual to use the product better. The product has been safely designed to prevent malfunctions and accidents. Please observe strictly the handling precautions below. If faults are suspected, consult the shop for IMI products nearest you without attempting to disassemble the camera yourself.</p>
---	---

Warning

Do not remove screws or covers to prevent fire or electric shock.

Do not expose this camera to rain, directly to sunlight or moisture, nor try to operate it in wet areas.

Do not attempt to remove camera cover nor modify any unit.

Warranty will be voided against the damage caused by you or any other equipment.

Precautions

- Do not attempt to disassemble, modify, or repair the camera.
- Do not directly shoot sunlight or strong spotlight to the camera for a long period as it may cause CCD blooming and permanent damages.
- Do not operate the camera beyond the temperature range and avoid using the camera over 90% humidity.
- Do not use unregulated power supply source.
- Do not clean CCD faceplate with fingers or any hard objects other than Lens tissue or a cotton tipped applicator and ethanol.
- Do not use the strong or abrasive detergents when cleaning the camera body.

Limited Warranty

1STVISION warrants only the original components to be free from defects in material for one year from the purchase date. This warranty covers failures or damages due to defects in material, which would occur during normal use. It does not cover damages or failures, which result from shipment, mishandling, abuse, misuse, or modification.

Any damage caused by improper handling will not be repaired by 1STVISION.

A Return Material Authorization (RMA) number is required prior to returning any 1STVISION product for repair or replacement.

This proprietary document may not be reproduced or photocopied without the consent of 1STVISION, which doesn't make any warranty or assume or responsibility for the errors which may not appear in this document.

1STVISION reserves the right to make changes without notice or obligation.

For technical assistance, please email to info@1stVision.com

COMPLIANCE STATEMENTS for CE, FCC, MIC

To meet EC requirements, shielded cables must be connected to other devices for these cameras. These cameras have been tested in the compliant environment of a typical class A. It is assumed that the camera has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide the reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation.

Blank Page

1. Introduction

1.1 Overview

MCF camera series are an IEEE 1394 compliant (Firewire™) progressive area scan color or B/W CCD cameras designed for industrial imaging applications. MCF cameras use the IEEE 1394 digital interface to streaming real-time uncompressed color image sequences in high resolution. The IEEE 1394 interface supports camera power, camera control and image data through only single cable, so user can use these cameras with simple cable connections.

What is the IEEE 1394 ?

The IEEE 1394 is the international standard about serial bus for transfer digital data up to 400Mbps, 800Mbps and 1.6Gbps.

It is also capable of "Isochronous transmission" for transmits data real-time up to 64 channels

MCF camera family is a compact size, c-mount type and fully supports IEEE 1394-1995, IEEE 1394a-2000 and IIDC Spec. 1.30. MCF camera family consists of several models, which are equipped with high sensitivity progressive scan CCD and have very different imager sizes each of 1/4, 1/3, 1/2, 2/3 inches. MCF camera family also supports various resolution modes for CIF, VGA, SVGA, XGA, SXGA and UXGA for each B/W and color models.

1.2 Features

- Low smear and excellent anti-blooming
- Continuous variable shutter speed
- High sensitivity and low dark current
- High speed digital interface up to 400Mbps
- Supports external trigger and power for trigger models

1.3 Applications

IMI-FCams can be use in machine vision, stereo vision, inspection, character recognition, medical, biomedical imaging, microscopy, traffic control, surveillance, RFID and other scientific or industrial applications

1.4 Specifications

1.4.1 Color and non-External trigger (F) models

- Standard models : MC-F433

1.4.2 Color and External trigger(FT/MT) models

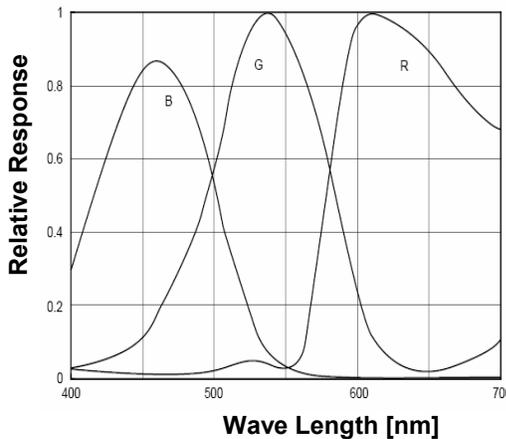

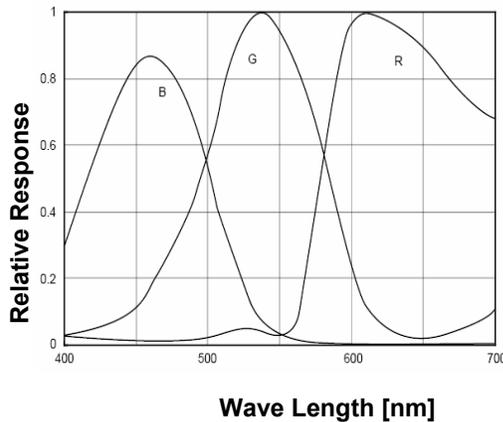

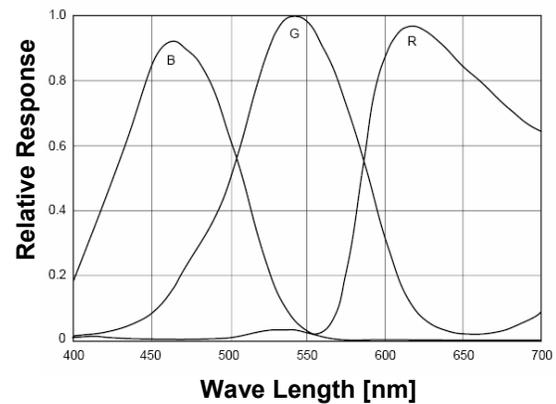

- Standard models :
- Double speed Models
- High MegaPixel Models :

1.4.3 Black/White (B/W) and External trigger(FT/MT) models

- Standard models
- Double speed Models :MC-F333MT
- High MegaPixel Models

Table 1-1 Color and non-External trigger models

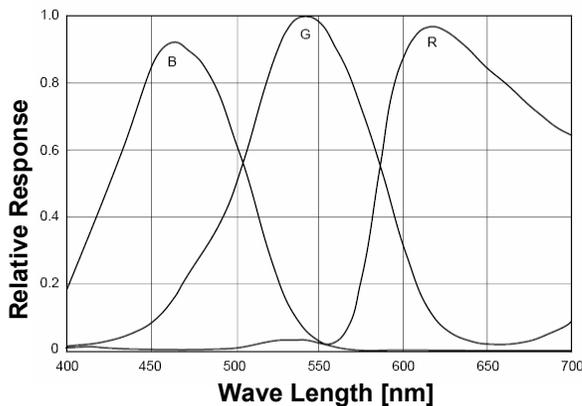

Features		MCF-433	
Image Device	1/2-inch Interline Wfine CCD	1/3-inch Interline Wfine CCD	1/4-inch Interline Wfine CCD
Effective pixels	1,450,000 pixel 1392 (H) x 1040 (V)	800,000 pixel 1034 (H) x 779 (V)	330,000 pixel 659 (H) x 494 (V)

2. Hardware Setup

2.1 Components of the camera shipment packaging

Camera, downloadable driver, optional API

2.2 Accessories for setup

2.2.1 IEEE 1394 Cable

Should be the flexible twisted pair and overall shielded cable
For notebook PC or tablet PC, it is used with 4p-to-6p IEEE1394 cable
On the other environment, there will be almost connected camera to PC with use 6p-to-6p cable

2.2.2 IEEE 1394 PCI OHCI Card

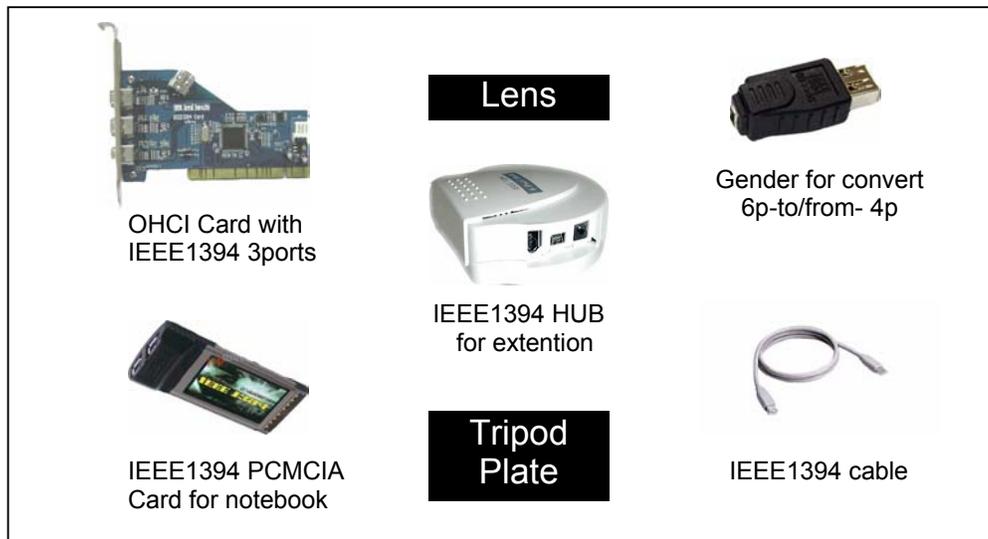

If you have already IEEE1394 port on your main board, then IEEE1394 OHCI card do not need.

2.2.3 Lens

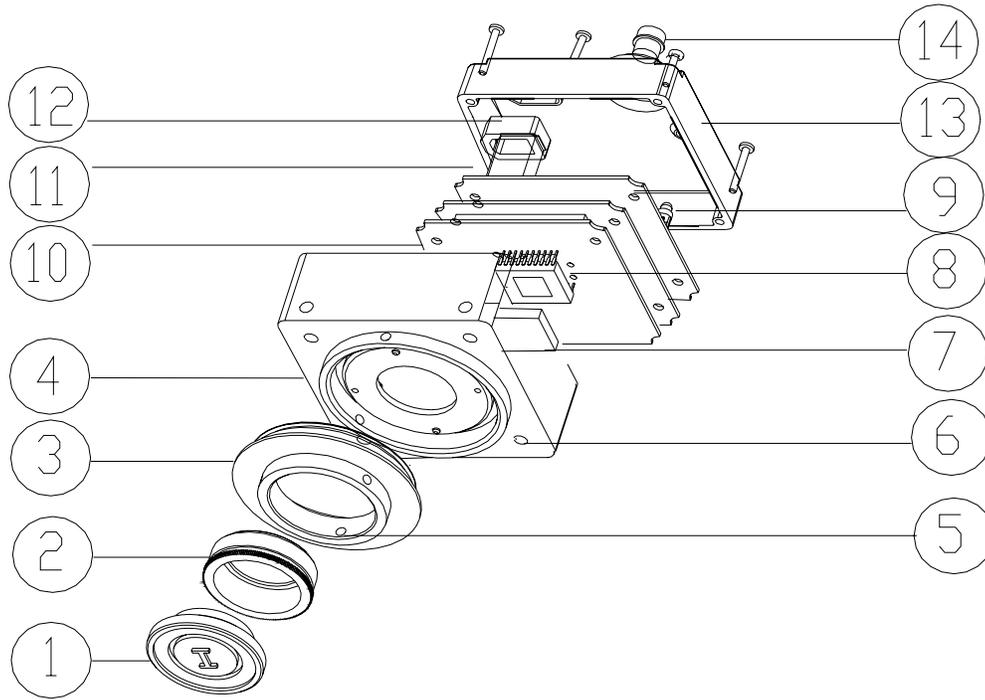

C-mount

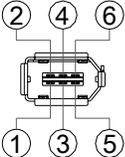

2.2.4 Tripod Mount Plate

If you need this plate, please contact your dealer.

2.4 System Environment

MC-FCams works with other windows application such as "amcap.exe" in DirectX SDK™, XP capture application in XP default, TWAIN interface, WDM stream an so on.

the camera also works with all IIDC (formerly DCAM) compatible IEEE 1394 program and image processing libraries such as IMAQ and MIL 7.5 or higher.

2.4.1 System Requirements

- IEEE 1394 OHCI Card or PCMCIA adapter
- Windows 2000 / XP
- IEEE 1394 Cable with 6p-to-6p or 4p-to-6p
- One or more MC-FCams Camera
- DirectX 9.0 or higher
 - In Windows XP Environment, we strongly recommend DirectX 9.0b or higher
- Video Adapter supports 24bit color and 1280x1024 resolution or higher
- CPU with 1.5GHz or more
- 128MByte or more System Memory

2.4.2 Demo Application - ImCam

The Demo Application only works for the camera included MC-FCams driver.
Please refer to the Demo Application Manual included in the downloaded SW(in Application Directory)

2.5 Multiple Camera Connections

If you have two or more IEEE 1394 cameras, you can connect these cameras to the PC simultaneously. In this situation, you can run cameras at the same time while you maintaining the total IEEE 1394 bandwidth for all cameras below the amount defined in IEEE 1394 specification.

The bandwidth of a camera can be calculated by multiplexing the data bits of a format, image resolution and frame rates. For example if you run with 800x600 @fps resolution, the bandwidth is $800 \times 600 \times 16 \times 15 = 115\text{Mbps}$.

3. Camera Functions

3.1 IEEE1394 DCAM Spec 1.30

MC-F digital cameras fully support IIDC Specification 1.30 which describes the standard definition for IEEE 1394 compliant digital cameras. The recommend specification supplied by 1394TA(www.1394ta.org) defines camera registers, fields within those registers, video formats, modes of operation, and controls for each.

Please refer to the IIDC Specification for detail register space.

3.2 Initialize

You can initialize the camera to factory default state by writing "1" to the following register.

Address	Name	Field	Bit	Description
FFFF F0F0 0000	INITIALIZE	Initialize	0	If assert this bit, Camera will re-set to initial (factory setting value) sate.

3.2.1 User Defined 1394 Address for CR on Power Reset

Address	Description	Read/Write
0xF2F10100 (Only for FT/MT Models)	Power on reset condition control register If bit value is 1, the current register value is saved as default or reset value. (Self cleared) At the next power on, this saving value is default/reset value. Bit 0 : Auto Exposure Bit 1 : Shutter Speed Bit 2 : Gain Bit 3 : Brightness Bit 4 : Sharpness Bit 5 : Gamma Bit 19 ~ Bit 6 : Reserved Bit 20 : Auto shutter-speed maximum/minimum value register Bit 21 : Auto gain maximum/minimum value register Bit 22 : Trigger control register Bit 23 : Strobe control register	Read/Write

3.3 Brightness

The brightness of images can be controlled by changing the black level setting. Adjust the brightness if the appropriate gradation cannot be obtained due to the blurring of the black portions of the image.

Address	Name	Field	Bit	Description
F0F0 0500	BRIGHTN ESS_INQ	Presence_Inq	0	Presence of this feature
		Abs_Control_Inq	1	Capability of control with absolute value
		-	2	Reserved
		One_Push_Inq	3	One push auto mode(Controlled automatically by camera only once)
		ReadOut_Inq	4	Capability of reading the value of this feature
		On/Off_Inq	5	Capability of switching this feature On and OFF
		Auto_Inq	6	Auto mode(Controlled automatically by camera)
		Manual_Inq	7	Manual mode(Controlled by user)
		Min_Value	[8..19]	Minimum value for this feature control
Max_Value	[20..31]	Maximum value for this feature control		
F0F0 0800	BRIGHTN ESS	Presence_Inq	0	Presence of this feature 0:N/A 1:Available
		Abs_Control	1	Absolute value control 0: Control with value in the Value field 1: Control with value in the Absolute value CSR If this bit = 1, value in the Value field is ignored.
		-	[2..4]	Reserved
		One_Push	5	Write '1' :begin to work(Self cleared after operation) Read: Value='1' in operation Value='0' not in operation If A_M_Mode =1, this bit is ignored
		ON_OFF	6	Write: ON or OFF this feature, Read: read a status 0:OFF, 1:ON If this bit=0, other fields will be read only.
		A_M_Mode	7	Write: set the mode, Read: read a current mode 0: Manual, 1:Auto
		-	[8..19]	Reserved
Value	[20..31]	Value. Write the value in Auto mode, this filed is ignored. If "ReadOut" capability is not available, read value Has no meaning		

3.4 Sharpness

3.4.1 F-Models

The sharpness procedure may be used to compensate low-pass effects caused for instance by the spatial color interpolation. If you prefer not to apply this kind of signal manipulation you should switch it off.

3.4.2 FT/MT-Models

Increase or decrease contrast. Increasing contrast increases the apparent difference in lightness between lighter and darker pixels. For FT/MT cameras, Contrast is mapping in feature

Address	Name	Field	Bit	Description
F0F0 0508	SHARPNE SS_INQ	Presence_Inq	0	Presence of this feature
		Abs_Control_Inq	1	Capability of control with absolute value
		-	2	Reserved
		One_Push_Inq	3	One push auto mode(Controlled automatically by camera only once)
		ReadOut_Inq	4	Capability of reading the value of this feature
		On/Off_Inq	5	Capability of switching this feature On and OFF
		Auto_Inq	6	Auto mode(Controlled automatically by camera)
		Manual_Inq	7	Manual mode(Controlled by user)
		Min_Value	[8..19]	Minimum value for this feature control
		Max_Value	[20..31]	Maximum value for this feature control
F0F0 0808	SHARPNE SS	Presence_Inq	0	Presence of this feature 0:N/A 1:Available
		Abs_Control	1	Absolute value control 0: Control with value in the Value field 1: Control with value in the Absolute value CSR If this bit = 1, value in the Value field is ignored.
		-	[2..4]	Reserved
		One_Push	5	Write '1':begin to work(Self cleared after operation) Read: Value='1' in operation Value='0' not in operation If A_M_Mode =1, this bit is ignored
		ON_OFF	6	Write: ON or OFF this feature, Read: read a status 0:OFF, 1:ON If this bit=0, other fields will be read only.
		A_M_Mode	7	Write: set the mode, Read: read a current mode 0: Manual, 1:Auto
		-	[8..19]	Reserved
		Value	[20..31]	Value. Write the value in Auto mode, this filed is ignored. If "ReadOut" capability is not available, read value Has no meaning

3.5 Gamma

If the gamma correction is on, the camera outputs gray levels adapted to the nonlinear behaviour of cathode ray tube(CRT).

Address	Name	Field	Bit	Description
F0F0 0518	GAMMA_INQ	Presence_Inq	0	Presence of this feature
		Abs_Control_Inq	1	Capability of control with absolute value
		-	2	Reserved
		One_Push_Inq	3	One push auto mode(Controlled automatically by camera only once)
		ReadOut_Inq	4	Capability of reading the value of this feature
		On/Off_Inq	5	Capability of switching this feature On and OFF
		Auto_Inq	6	Auto mode(Controlled automatically by camera)
		Manual_Inq	7	Manual mode(Controlled by user)
		Min_Value	[8..19]	Minimum value for this feature control
Max_Value	[20..31]	Maximum value for this feature control		
F0F0 0818	GAMMA	Presence_Inq	0	Presence of this feature 0:N/A 1:Available
		Abs_Control	1	Absolute value control 0: Control with value in the Value field 1: Control with value in the Absolute value CSR If this bit = 1, value in the Value field is ignored.
		-	[2..4]	Reserved
		One_Push	5	Write '1' :begin to work(Self cleared after operation) Read: Value='1' in operation Value='0' not in operation If A_M_Mode =1, this bit is ignored
		ON_OFF	6	Write: ON or OFF this feature, Read: read a status 0:OFF, 1:ON If this bit=0, other fields will be read only.
		A_M_Mode	7	Write: set the mode, Read: read a current mode 0: Manual, 1:Auto
		-	[8..19]	Reserved
Value	[20..31]	Value. Write the value in Auto mode, this filed is ignored. If "ReadOut" capability is not available, read value Has no meaning		

GAMMA Value	4	5	6	7	8	9	10	11	12	13	14
GAMMA	0.4	0.5	0.6	0.7	0.8	0.9	1.0	1.1	1.2	1.3	1.4

GAMMA Value	15	16	17	18	19	20	21	22	23	24	25
GAMMA	1.5	1.6	1.7	1.8	1.9	2.0	2.1	2.2	2.3	2.4	2.5

3.6 Saturation

The saturation control allows you to manually adjust the level of color in the digital image from zero (black and white) to many colors. If you prefer not to apply this kind of signal manipulation, you can switch it off. The saturation is applied only to F-Models such as MCF-433.

Address	Name	Field	Bit	Description
F0F0 0514	SATURATI ON_INQ	Presence_Inq	0	Presence of this feature
		Abs_Control_Inq	1	Capability of control with absolute value
		-	2	Reserved
		One_Push_Inq	3	One push auto mode(Controlled automatically by camera only once)
		ReadOut_Inq	4	Capability of reading the value of this feature
		On/Off_Inq	5	Capability of switching this feature On and OFF
		Auto_Inq	6	Auto mode(Controlled automatically by camera)
		Manual_Inq	7	Manual mode(Controlled by user)
		Min_Value	[8..19]	Minimum value for this feature control
		Max_Value	[20..31]	Maximum value for this feature control
F0F0 0814	SATURATI ON	Presence_Inq	0	Presence of this feature 0:N/A 1:Available
		Abs_Control	1	Absolute value control 0: Control with value in the Value field 1: Control with value in the Absolute value CSR If this bit = 1, value in the Value field is ignored.
		-	[2..4]	Reserved
		One_Push	5	Write '1':begin to work(Self cleared after operation) Read: Value='1' in operation Value='0' not in operation If A_M_Mode =1, this bit is ignored
		ON_OFF	6	Write: ON or OFF this feature, Read: read a status 0:OFF, 1:ON If this bit=0, other fields will be read only.
		A_M_Mode	7	Write: set the mode, Read: read a current mode 0: Manual, 1:Auto
		-	[8..19]	Reserved
		Value	[20..31]	Value. Write the value in Auto mode, this filed is ignored. If "ReadOut" capability is not available, read value Has no meaning

3.7 White Balance

U/R(red/green) and V/B(green/blue) controls alter the degree to which red and blue CCD component pixels are weighted to form composite pixels. White balance can be controlled manually or automatically. In manual mode, you can change both parameters.

This helps you to initially set the camera as quickly as possible. Some adjustment may be necessary, depending on current illumination. For this purpose, parameter changing has to be inactive.

The automatic white balance feature offers two operation modes. If "Auto" is checked, the balancing algorithms affect the video stream continuously.

Furthermore, the "One Push" white balance option can be used for a one-push (non-iterative) calibration of the white balance values.

However, if you prefer not to apply this kind of signal manipulation at all, you can switch it off. The White Balance is applied only to F-Models such as MCF-433.

Address	Name	Field	Bit	Description
F0F0 050C	WHITE _BAL_I NQ	Presence_Inq	0	Presence of this feature
		Abs_Control_Inq	1	Capability of control with absolute value
		-	2	Reserved
		One_Push_Inq	3	One push auto mode(Controlled automatically by camera only once)
		ReadOut_Inq	4	Capability of reading the value of this feature
		On/Off_Inq	5	Capability of switching this feature On and OFF
		Auto_Inq	6	Auto mode(Controlled automatically by camera)
		Manual_Inq	7	Manual mode(Controlled by user)
		Min_Value	[8..19]	Minimum value for this feature control
		Max_Value	[20..31]	Maximum value for this feature control
F0F0 080C	WHITE _BALA NCE	Presence_Inq	0	Presence of this feature. 0:N/A 1:Available
		Abs_Control	1	Absolute value control 0: Control with value in the Value field 1: Control with value in the Absolute value CSR If this bit = 1, value in the Value field is ignored.
		-	[2..4]	Reserved
		One_Push	5	Write '1' :begin to work(Self cleared after operation) Read: Value='1' in operation Value='0' not in operation If A_M_Mode =1, this bit is ignored
		ON_OFF	6	Write: ON or OFF this feature, Read: read a status 0:OFF, 1:ON If this bit=0, other fields will be read only.
		A_M_Mode	7	Write: set the mode, Read: read a current mode 0: Manual, 1:Auto
		U/B_Value	[8..19]	U Value / B_Value. Write the value in AUTO mode, this field is ignored. If "ReadOut" capability is not available,, read value has no mean
		V/R_Value	[20..31]	V Value / R_Value Write the value in AUTO mode, this field is ignored. If"ReadOut" capability is not available, read value has no mean

3.8 Shutter

The shutter control allows the CCD image integration time to be set. This parameter can be configured manually or automatically (together with gain) using an internal feedback loop.

Address	Name	Field	Bit	Description
F0F0 051C	SHUTTER _INQ	Presence_Inq	0	Presence of this feature
		Abs_Control_Inq	1	Capability of control with absolute value
		-	2	Reserved
		One_Push_Inq	3	One push auto mode(Controlled automatically by camera only once)
		ReadOut_Inq	4	Capability of reading the value of this feature
		On/Off_Inq	5	Capability of switching this feature On and OFF
		Auto_Inq	6	Auto mode(Controlled automatically by camera)
		Manual_Inq	7	Manual mode(Controlled by user)
		Min_Value	[8..19]	Minimum value for this feature control
		Max_Value	[20..31]	Maximum value for this feature control
F0F0 081C	SHUTTER	Presence_Inq	0	Presence of this feature 0:N/A 1:Available
		Abs_Control	1	Absolute value control 0: Control with value in the Value field 1: Control with value in the Absolute value CSR If this bit = 1, value in the Value field is ignored.
		-	[2..4]	Reserved
		One_Push	5	Write '1' :begin to work(Self cleared after operation) Read: Value='1' in operation Value='0' not in operation If A_M_Mode =1, this bit is ignored
		ON_OFF	6	Write: ON or OFF this feature, Read: read a status 0:OFF, 1:ON If this bit=0, other fields will be read only.
		A_M_Mode	7	Write: set the mode, Read: read a current mode 0: Manual, 1:Auto
		-	[8..19]	Reserved
		Value	[20..31]	Value. Write the value in Auto mode, this filed is ignored. If "ReadOut" capability is not available, read value Has no meaning

3.8.1 Shutter Speed for MCF-433

Exposure Time	Exposure Value
1/30 Sec	~511(max)
1/60 Sec	386
1/120 Sec	256
1/500 Sec	108
1/1000 Sec	45
1/2000 Sec	13
1/3000 Sec	2
1/3424 Sec	0(min)

3.8.4 Shutter Speed for All Trigger Cameras

1394 Shutter Value (Y)	Increment Step	Shutter Speed Time : T	
		Exposure Time	Range
1~500	1us	$T = Y \text{ us}$	1us ~ 500us
501~1000	10us	$T = (Y-500)*10+500 \text{ us}$	510us ~ 5500us
1001~1705	100us	$T = (Y-1000)*100+5500 \text{ us}$	5.6ms ~ 76ms
1706 ~ 2399	1ms	$T = (Y-1705)+76 \text{ ms}$	77ms ~ 770ms
2400~2902	10ms	$T = (Y-2399)*10+770 \text{ ms}$	780ms ~ 5800ms
2903~3304	100ms	$T = (Y-2902)*100+5800 \text{ ms}$	5.9s ~ 46s
3305~3323	1s	$T = (Y-3304)*1000+46000 \text{ ms}$	47s ~ 65s

Example Shutter Speed Table			
1394 Shutter	Exposure Time	1394 Shutter	Exposure Time
1	1us	1729	100ms
10	10us	1829	200ms
100	100us	2129	500ms
500	500us	2422	1s
	1ms	2522	2s
650	2ms	2822	
950	5ms		
1045	10ms		20s
	20ms		60s
1445	50ms	3323	65s

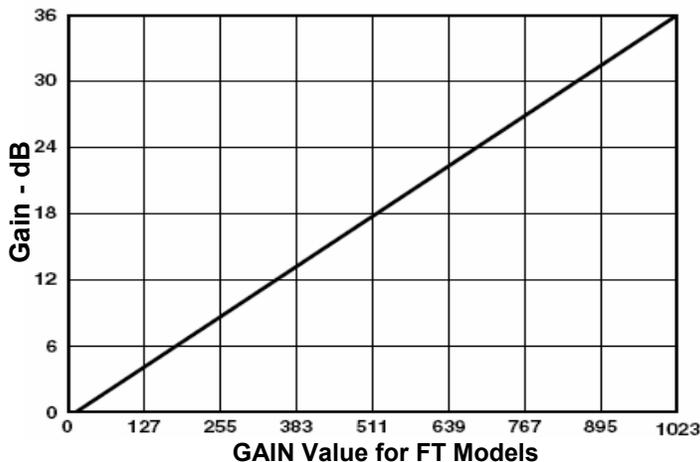

3.8.5 User Defined 1394 Address for Auto Shutter Speed

Address	Description	Read/Write		
0xF2F10004 (Only for FT/MT Models)	<p>Auto shutter-speed maximum/minimum value register.*(32bit) At auto shutter mode, shutter speed value is checked between auto shutter-speed maximum value and minimum value.</p> <div style="display: flex; justify-content: space-between; align-items: center;"> 31 16 15 0 </div> <table border="1" style="width: 100%; margin-top: 5px;"> <tr> <td style="width: 50%;">Auto shutter-speed Maximum value</td> <td style="width: 50%;">Auto shutter-speed Minimum value</td> </tr> </table>	Auto shutter-speed Maximum value	Auto shutter-speed Minimum value	Read/Write
Auto shutter-speed Maximum value	Auto shutter-speed Minimum value			

3.9 Gain

Gain refers to the amount of amplification of the CCD's output signal. Gain and Shutter have a similar effect on the image. MC-140F and 80F cameras can be set gain value from 0 to 18dB and this range is divided into 98 steps for detailed control.

Address	Name	Field	Bit	Description
F0F0 0520	GAIN_INQ	Presence_Inq	0	Presence of this feature
		Abs_Control_Inq	1	Capability of control with absolute value
		-	2	Reserved
		One_Push_Inq	3	One push auto mode(Controlled automatically by camera only once)
		ReadOut_Inq	4	Capability of reading the value of this feature
		On/Off_Inq	5	Capability of switching this feature On and OFF
		Auto_Inq	6	Auto mode(Controlled automatically by camera)
		Manual_Inq	7	Manual mode(Controlled by user)
		Min_Value	[8..19]	Minimum value for this feature control
		Max_Value	[20..31]	Maximum value for this feature control
F0F0 0820	GAIN	Presence_Inq	0	Presence of this feature 0:N/A 1:Available
		Abs_Control	1	Absolute value control 0: Control with value in the Value field 1: Control with value in the Absolute value CSR If this bit = 1, value in the Value field is ignored.
		-	[2..4]	Reserved
		One_Push	5	Write '1' :begin to work(Self cleared after operation) Read: Value='1' in operation Value='0' not in operation If A_M_Mode =1, this bit is ignored
		ON_OFF	6	Write: ON or OFF this feature, Read: read a status 0:OFF, 1:ON If this bit=0, other fields will be read only.
		A_M_Mode	7	Write: set the mode, Read: read a current mode 0: Manual, 1:Auto
		-	[8..19]	Reserved
		Value	[20..31]	Value. Write the value in Auto mode, this filed is ignored. If "ReadOut" capability is not available, read value Has no meaning

(NOTE 1)
This gain curve is valid only for
Trigger Cameras (FT/MT Models).

3.9.1 User Defined Address for Auto Gain only for FT/MT Models

Address	Description	Read/Write
0xF2F10000	A/D bit resolution Bit 3~Bit0 : A/D bit resolution	Read only
0xF2F10008	Auto gain maximum/minimum value register.*(32bit) At auto gain mode, gain value is checked between auto gain maximum value and minimum value. <div style="text-align: center; margin-top: 10px;"> 31 16 15 0 </div> <div style="text-align: center; margin-top: 10px;"> <div style="border: 1px solid black; display: inline-block; padding: 5px; margin-right: 20px;">Auto gain Maximum value</div> <div style="border: 1px solid black; display: inline-block; padding: 5px;">Auto gain Minimum value</div> </div>	Read/Write

3.10 Auto Exposure

The automatic shutter/gain mode is based on a feedback loop which calculates the average pixel luminance. This average is then compared with the exposure reference value, adjusting shutter and gain accordingly.

As of now, for the cameras, Auto Exposure value is used as the main value to AE algorithm.

Address	Name	Field	Bit	Description
F0F00504	AUTO_EXPOSURE_INQ	Presence_Inq	0	Presence of this feature
		Abs_Control_Inq	1	Capability of control with absolute value
		-	2	Reserved
		One_Push_Inq	3	One push auto mode(Controlled automatically by camera only once)
		ReadOut_Inq	4	Capability of reading the value of this feature
		On/Off_Inq	5	Capability of switching this feature On and OFF
		Auto_Inq	6	Auto mode(Controlled automatically by camera)
		Manual_Inq	7	Manual mode(Controlled by user)
		Min_Value	[8..19]	Minimum value for this feature control
Max_Value	[20..31]	Maximum value for this feature control		
F0F00804	AUTO_EXPOSURE	Presence_Inq	0	Presence of this feature 0:N/A 1:Available
		Abs_Control	1	Absolute value control 0: Control with value in the Value field 1: Control with value in the Absolute value CSR If this bit = 1, value in the Value field is ignored.
		-	[2..4]	Reserved
		One_Push	5	Write '1':begin to work(Self cleared after operation) Read: Value='1' in operation Value='0' not in operation If A_M_Mode =1, this bit is ignored
		ON_OFF	6	Write: ON or OFF this feature, Read: read a status 0:OFF, 1:ON If this bit=0, other fields will be read only.
		A_M_Mode	7	Write: set the mode, Read: read a current mode 0: Manual, 1:Auto
		-	[8..19]	Reserved
Value	[20..31]	Value. Write the value in Auto mode, this filed is ignored. If "ReadOut" capability is not available, read value Has no meaning		

3.11 Optical Filter

MC-FCams support 3200K and 5100K as color temperature.

The Optical Filter is applied only to F-Models such as MCF-433,MC-80F,MC-140F.

Address	Name	Field	Bit	Description
F0F0 0580	OPTICAL_FILTER_INQ	Presence_Inq	0	Presence of this feature
		Abs_Control_Inq	1	Capability of control with absolute value
			2	Reserved
		One_Push_Inq	3	One push auto mode(Controlled automatically by camera only once)
		ReadOut_Inq	4	Capability of reading the value of this feature
		On/Off_Inq	5	Capability of switching this feature On and OFF
		Auto_Inq	6	Auto mode(Controlled automatically by camera)
		Manual_Inq	7	Manual mode(Controlled by user)
		Min_Value	[8..19]	Minimum value for this feature control
		Max_Value	[20..31]	Max Value for this feature control
F0F0 0880	OPTICAL_FILTER	Presence_Inq	0	Presence of this feature 0:N/A 1:Available
		Abs_Control	1	Absolute value control 0: Control with value in the Value field 1: Control with value in the Absolute value CSR If this bit = 1, value in the Value field is ignored.
			[2..4]	Reserved
		One_Push	5	Write '1' :begin to work(Self cleared after operation) Read: Value='1' in operation Value='0' not in operation If A_M_Mode =1, this bit is ignored
		ON_OFF	6	Write: ON or OFF this feature, Read: read a status 0:OFF, 1:ON If this bit=0, other fields will be read only.
		A_M_Mode	7	Write: set the mode, Read: read a current mode 0: Manual, 1:Auto
		-	[8..19]	Reserved
		Value	[20..31]	Value. Write the value in Auto mode, this filed is ignored. If "ReadOut" capability is not available, read value Has no meaning

3.12 Trigger

The functions of external trigger is supported only for FT/MT cameras.

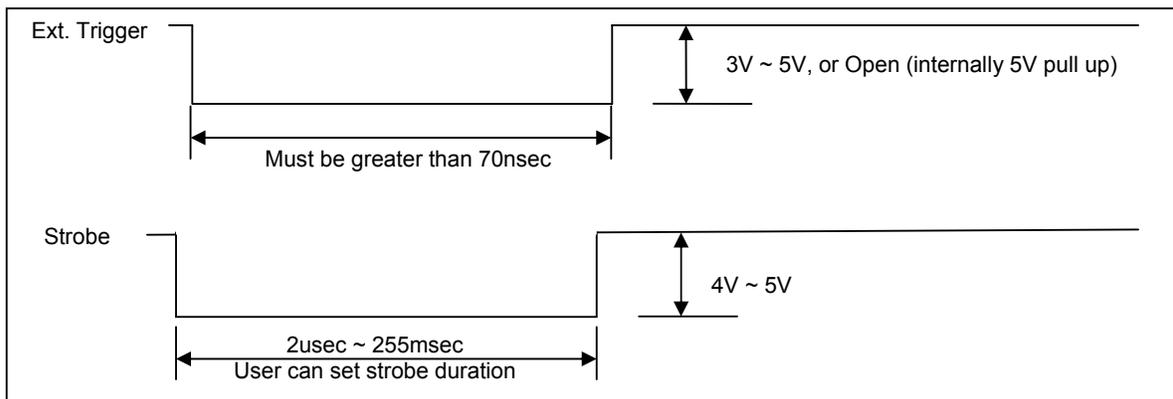

Address	Name	Field	Bit	Description
F0F0 0530	TRIGGER _INQ	Presence_Inq	0	Presence of this feature
		Abs_Control_Inq	1	Capability of control with absolute value
		-	[2..3]	Reserved
		ReadOut_Inq	4	Capability of reading the value of this feature
		On/Off_Inq	5	Capability of switching this feature On and OFF
		Polarity_Inq	6	Capability of changing polarity of trigger input
		-	[7..15]	Reserved
		Trigger_Mode0_Inq	16	Presence of Trigger Mode0
		Trigger_Mode1_Inq	17	Presence of Trigger Mode1
		Trigger_Mode2_Inq	18	Presence of Trigger Mode2
Trigger_Mode3_Inq	19	Presence of Trigger Mode3		
-	[20..31]	Reserved		
F0F0 0830	TRIGGER _MODE	Presence_Inq	0	Presence of this feature 0:N/A 1:Available
		Abs_Control	1	Absolute value control 0: Control with value in the Value field 1: Control with value in the Absolute value CSR If this bit = 1, value in the Value field is ignored.
		-	[2..5]	Reserved
		ON_OFF	6	Write: ON or OFF this feature Read: read a status 0: OFF, 1: ON If this bit=0, other fields will be read only.
		Trigger_Polarity	7	If Polarity_Inq is "1", Write to change polarity of the trigger input Read to get polarity of trigger input If Polarity_Inq is "0", Read only. (0: Low active input, 1: High active input)
		-	[8..11]	Reserved
		Trigger_Mode	[12..15]	Trigger mode.(Trigger_Mode_0-15)
		-	[16..19]	Reserved
Parameter	[20..31]	Parameter for trigger function, if required.(Optional)		

3.12.1 User Defined 1394 Address for Trigger Features

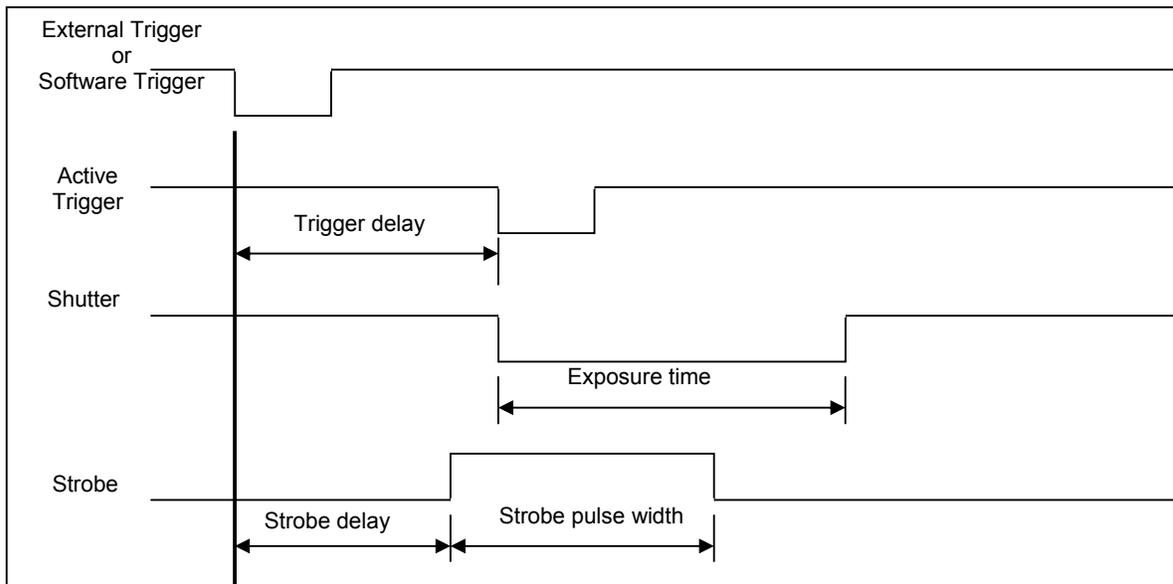

Address	Description	Read/Write
0xF2F10104	Trigger control register Bit 0 : External trigger active edge (0:falling edge, 1:rising edge) Bit 1 : Software trigger enable (0: external trigger mode, 1: software trigger mode) Bit 2 : Trigger delay enable (0: disable, 1:enable) If trigger delay enable bit is 0, trigger delay is 2 usec. Bit 3 : Trigger delay unit (0: 1usec, 1: 1msec) Bit 13~ Bit 4 :Trigger delay (D: 0 ~ 1023) : delay time range : 3.5usec ~ 1023msec If trigger delay unit is 0, trigger delay time = (D + 3.5) usec If trigger delay unit is 1, trigger delay time = D msec + 3.5usec	Read/Write

Address	Description	Read/Write
0xF2F10108	Software trigger Whenever this address is accessed, one trigger pulse is generated. The read value means software trigger count from starting time of trigger mode	Read Only
0xF2F1010C	Strobe Control Register. Bit 0 : Strobe enable (0: disable, 1: enable) Bit 1 : Strobe active (0: active low, 1: active high) Bit 2 : Strobe delay unit (0: 1usec, 1: 250usec) Bit 3 : Strobe pulse width unit (0: 1usec, 1: 250usec) Bit 13 ~ Bit 4 : Strobe delay (D: 0 ~ 1023): delay time range : 1usec ~ 255msec If strobe delay unit is 0, strobe delay time = (D + 0.3) usec If strobe delay unit is 1, strobe delay time = (D * 250) usec Bit 23 ~ Bit 16 : Strobe pulse width (D: 0 ~ 255): width range : 1usec ~ 64msec If strobe pulse width unit is 0, strobe duration time = (D+1) usec If strobe pulse width unit is 1, strobe duration time = (D+1)*250 usec	Read/Write

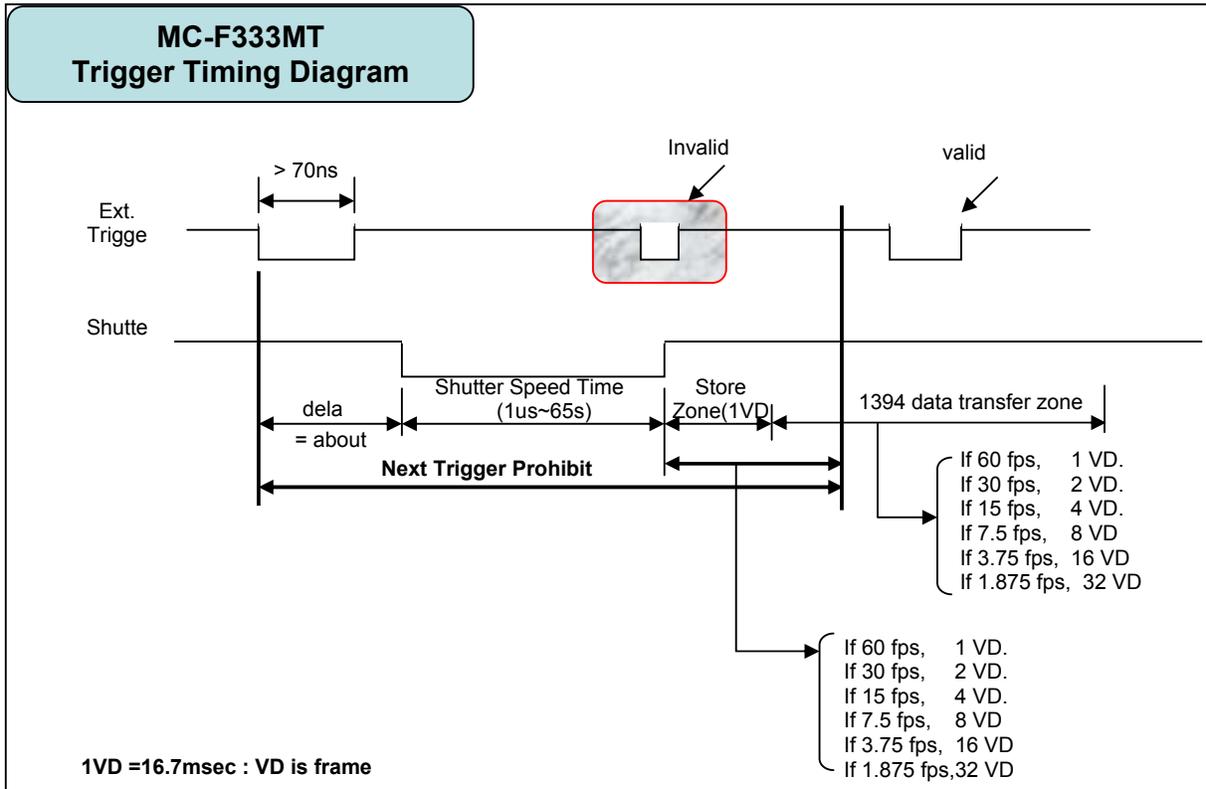

3.12.2 Electrical Specification for Ext. Trigger and Strobe signal

3.12.3 Trigger & Strobe signal relation

3.12.4 Trigger Timing Diagram

3.13 Available Video Formats, Modes, & Frame Rates

3.13.1 Standards for MCF-433 Color Camera

The following standard video formats, modes, and frame rates are available on the MCF-433 color camera

Format_0, Mode_0	FrameRate_2	(YUV 4:4:4, 24 bits/pixel, 160 x 120 pixels at 7.5 fps)
Format_0, Mode_0	FrameRate_3	(YUV 4:4:4, 24 bits/pixel, 160 x 120 pixels at 15 fps);
Format_0, Mode_0	FrameRate_4	(YUV 4:4:4, 24 bits/pixel, 160 x 120 pixels at 30 fps)
Format_0, Mode_1	FrameRate_1	(YUV 4:2:2, 16 bits/pixel, 320 x 240 pixels at 3.75 fps)
Format_0, Mode_1	FrameRate_2	(YUV 4:2:2, 16 bits/pixel, 320 x 240 pixels at 7.5 fps)
Format_0, Mode_1	FrameRate_3	(YUV 4:2:2, 16 bits/pixel, 320 x 240 pixels at 15 fps)
Format_0, Mode_1	FrameRate_4	(YUV 4:2:2, 16 bits/pixel, 320 x 240 pixels at 30 fps)
Format_0, Mode_2	FrameRate_1	(YUV 4:1:1, 12 bits/pixel, 640 x 480 pixels at 3.75 fps)
Format_0, Mode_2	FrameRate_2	(YUV 4:1:1, 12 bits/pixel, 640 x 480 pixels at 7.5 fps)
Format_0, Mode_2	FrameRate_3	(YUV 4:1:1, 12 bits/pixel, 640 x 480 pixels at 15 fps)
Format_0, Mode_2	FrameRate_4	(YUV 4:1:1, 12 bits/pixel, 640 x 480 pixels at 30 fps)
Format_0, Mode_3	FrameRate_1	(YUV 4:2:2, 16 bits/pixel, 640 x 480 pixels at 3.75 fps)
Format_0, Mode_3	FrameRate_2	(YUV 4:2:2, 16 bits/pixel, 640 x 480 pixels at 7.5 fps)
Format_0, Mode_3	FrameRate_3	(YUV 4:2:2, 16 bits/pixel, 640 x 480 pixels at 15 fps)
Format_0, Mode_4	FrameRate_1	(RGB24, 24 bits/pixel, 640 x 480 pixels at 3.75 fps)
Format_0, Mode_4	FrameRate_2	(RGB24, 24 bits/pixel, 640 x 480 pixels at 7.5 fps)
Format_0, Mode_4	FrameRate_3	(RGB24, 24 bits/pixel, 640 x 480 pixels at 15 fps)
Format_0, Mode_5	FrameRate_1	(Mono, 8 bits/pixel, 640 x 480 pixels at 3.75 fps)
Format_0, Mode_5	FrameRate_2	(Mono, 8 bits/pixel, 640 x 480 pixels at 7.5 fps)
Format_0, Mode_5	FrameRate_3	(Mono, 8 bits/pixel, 640 x 480 pixels at 15 fps)
Format_0, Mode_5	FrameRate_4	(Mono, 8 bits/pixel, 640 x 480 pixels at 30 fps)

3.13.4 Standards for MC-333MT

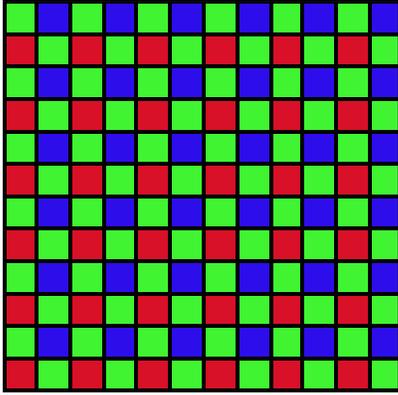

Format0_Mode5	FrameRate_1	Mono, 8 bits/pixel, 640 x 480 pixels at 3.75 fps
Format0_Mode5	FrameRate_2	Mono, 8 bits/pixel, 640 x 480 pixels at 7.5 fps
Format0_Mode5	FrameRate_3	Mono, 8 bits/pixel, 640 x 480 pixels at 15 fps
Format0_Mode5	FrameRate_4	Mono, 8 bits/pixel, 640 x 480 pixels at 30 fps
Format0_Mode5,	FrameRate_5	Mono, 8 bits/pixel, 640 x 480 pixels at 60 fps

*

Format0_Mode6	FrameRate_1	Mono, 16 bits/pixel, 640 x480 pixels at 3.75 fps
Format0_Mode6	FrameRate_2	Mono, 16 bits/pixel, 640 x480 pixels at 7.5 fps
Format0_Mode6	FrameRate_3	Mono, 16 bits/pixel, 640 x480 pixels at 15 fps
Format0_Mode6	FrameRate_4	Mono, 16 bits/pixel, 640 x480 pixels at 30 fps

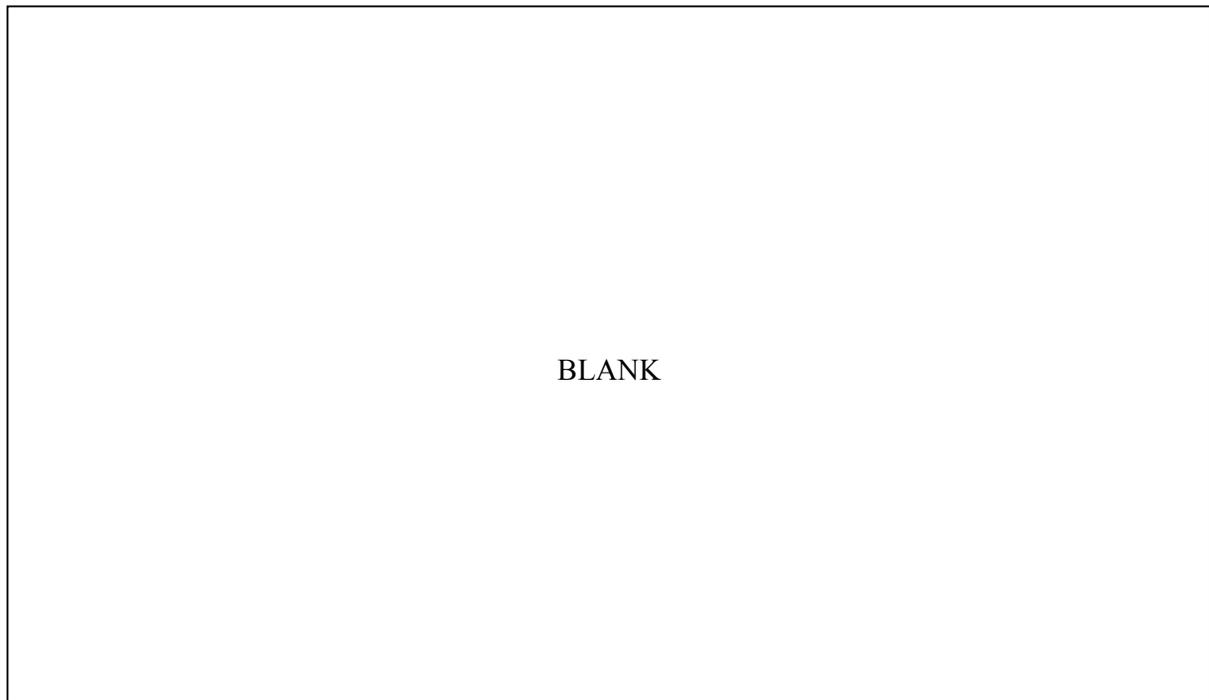

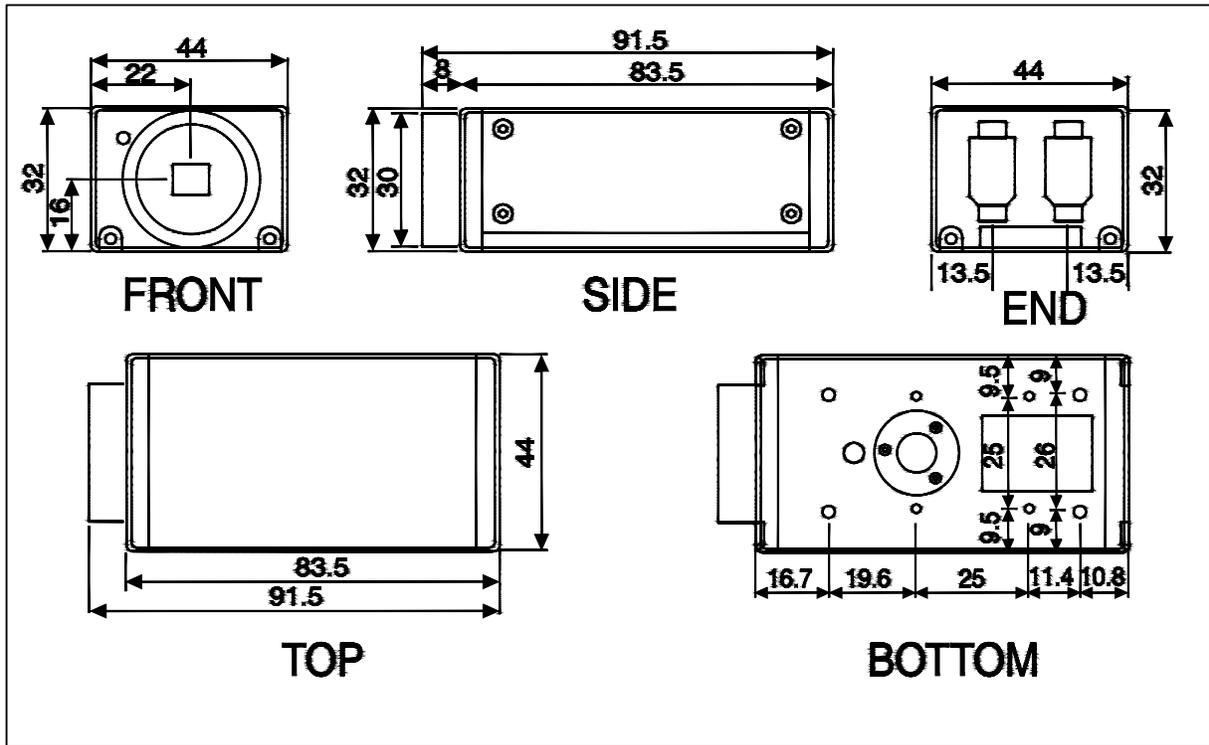

3.14 Output Data Format for color cameras

The data format of color cameras is outputting as Bayer RGB data format and the form of the data transmitted from is as follows.

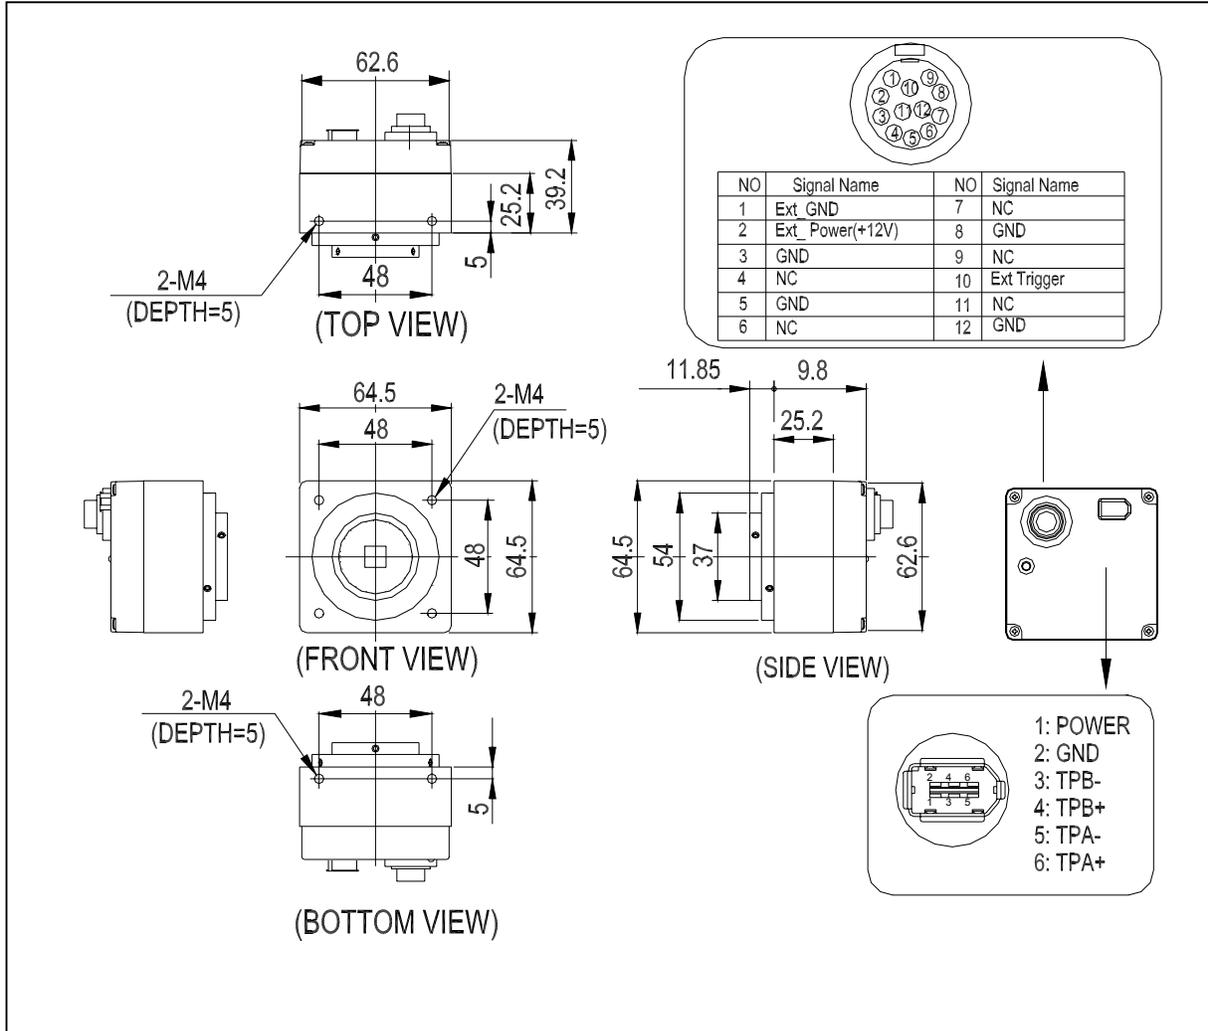

4. Camera Dimensions

4.1 MCF-433

4.3 Trigger Models : MC-FyyyX (x = B/W or Color, yyy = Resoltion Size)

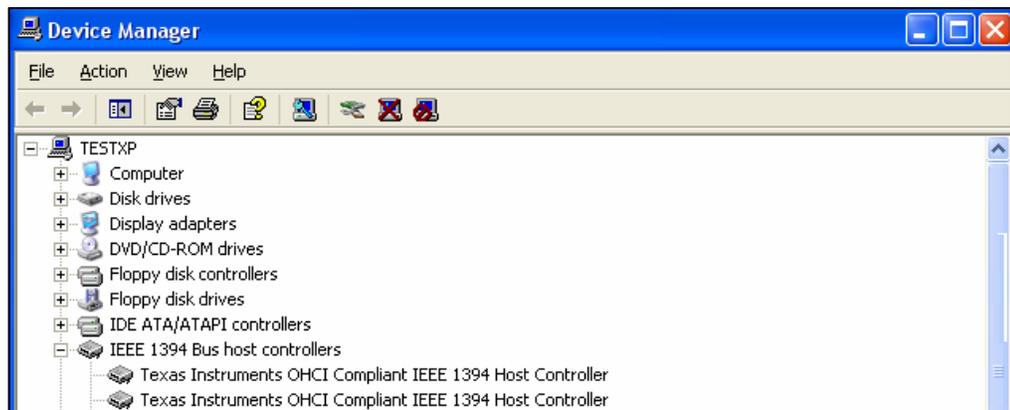

5. Troubleshooting

5.1 Fault Checking Using the Camera LED

5.1.1 Fault Checking Using the Camera LED

When you connect the camera with the PC through the IEEE 1394 cable, the LED in the back panel of the camera should be switched to Red color. If you cannot see this color, check the following items:

- Check the OHCI card driver is installed properly
- Check the OHCI card driver is installed by clicking the right button on the “MyComputer” and select “Property”. When the property window shown, select “Hardware” tab and select “Device Manager” button at the page. In this dialog you can check whether the card driver is installed correctly or not like as follows.

- Check the IEEE 1394 Cable is working

5.1.2 Green LED

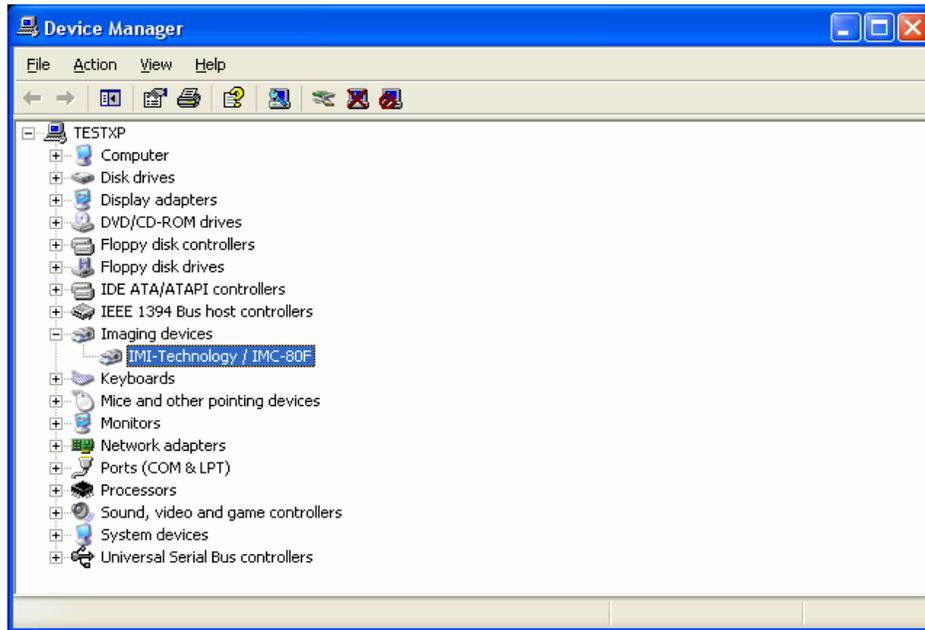

When you run the camera, the LED in the back panel should turn into green color. If the LED doesn't change the color, camera may not be working properly and you may not receive the camera data. In this situation, plug off the camera after exiting application and re-connect the camera and run again.

If you cannot see green color still, contact the technical support.

5.2 Error Messages while running the DEMO Application

5.2.1 “Can not Find the 1394 Camera”

If the dialog saying that “Can not Find the 1394 Camera” when you run the demo application, check the device driver for camera is installed properly. You can check the device driver by clicking the right button of the mouse on the “MyComputer” and selecting the “Property”. When the property dialog shown, select the “Hardware” tab and push the “Device Manager” button. In this dialog you should see “imaging device” list item, and you can see the camera lists if you expand the “image device” item like as follows.

5.2.2 “Can not Find the 1394

The following information can help you solve problems that may occur during the setup of your camera. Make sure that the camera is part of the entire acquisition system.

You may have to troubleshoot any or all of the following.

- Power supplies
- cabling
- Framegrabbers H/W and S/W
- host computer
- light source
- optics
- operation environment

5.2.3 Common Solutions

The first step in troubleshooting is verify that your camera has all the correct connections regarding Power supply, Data cables, etc.

6. Technical Support Information

For technical assistance, contact 1stVision Support or Application Engineer.
